Gentlemen:

I am writing to request further information about research grant support in the area of cardiovascular disease. Our research group in the Division of Experimental Medicine has been working in the area of Mechanism of Free Radical Mediated Cardiovascular Injury. In recent years, our efforts have focussed on the antioxidant properties of cardiovascular drugs with particular emphasis on studies of endothelial, smooth muscle and isolated adult cardiocytes. I would like to receive information about the application process for support from your organization.

Sincerely,

William B. Weglicki, M.D.
Director
Division of Experimental Medicine
